

# PHARMAGUARDIA

PharmaGuardia is a project that seeks to make it easier for the user to search for on-call pharmacies, depending on the area they want.

What we are looking for is that the user of our application in any case or situation that is found can find quickly and efficiently. Surely many, after being in the emergency room at night, think "What a chore to look for a pharmacy on duty" because with our application we seek to facilitate this, the user through geolocation, and other ways, will be able to find the closest pharmacy and the route that must use.

## PharmaGuardia

We would also like to add that the user can give "trust" to a pharmacy. This trusted pharmacy is the one that any user uses frequently and where they will have direct contact with it, to find out if, for example, their monthly medications already appear and they do not have to travel unnecessarily.

It is a project focused on fully helping the user by facilitating any management they have between their Health Center and the Pharmacy.
